

Rollover

Look to the Tilt-Lock Rollover if you want a better way to handle your materials. It's smooth, safe, efficient.

For unwind applications, a fork truck delivers the palletted roll to the Rollover Table. By the push of a button, it is gently pivoted to a horizontal position. A ramp can be used to roll the material to a shafting position.

The Tilt-Lock Rollover offers a unique design, and is ruggedly constructed to assure you quiet, trouble-free performance.

- Rollover Capacity - 200 lbs. to 10,000 lbs.
- Turning Time - 15 to 20 seconds
- Choice of 110 volt AC 1 phase or 460/230/3 phase with 110V control voltage
- Pushbutton control
- Counter balance valves hold the table tilting cylinder in case of hydraulic system or hose failure
- Heavy duty industrial grade hydraulic power units
- All bearings are sealed and pre-lubricated
- Low maintenance requirement - routine checking of hydraulic system is all that is required.
- Optional Equipment - Pallet holder, ramp and notched table for loading and unloading shaft rolls
- Custom designs available
- All Rollovers are made to customer specs
